

SWECON

In Sweden, TYRI have been working with Swecon - a distributor of Volvo Construction Machines for a number of years. Working in aftermarket sales, TYRI equip their machines with LED lighting solutions.

Swecon, Germany contacted TYRI as they were looking for a high quality LED Headlight as a replacement for Halogen. Then in autumn 2021, TYRI was given the opportunity to deliver the first installation on a Volvo EW 180 E.

Swecon's customer requested that his new construction machine was equipped with LED work lights and LED

headlights. Swecon recommended TYRI lights, and fitted TYRI 1010 work lights with 3200 effective lumens each and HL Compact headlights and HL turn signals. To help in the installation, TYRI also supplied Swecon with suitable brackets.

Sibylle Naumann-Edgren, Area Sales Manager Central Europe stated, "After visiting Swecon, Germany following the completion of the work, I was really impressed by the enthusiasm, exceptional commitment, interest and passion which Swecon's staff showed for our lighting solutions. We wish Swecon's customer a lot of joy with the new construction machine and our lighting solution."
